PROJETS

- **Django-based E-commerce Web**
Application: As the sole developer, I designed and implemented the entire back end and front end of the application. I developed key features such as product listing, shopping cart, payment integration, and user authentication.
- **Sun Architecture Website:**
I was responsible for designing and developing the website's back end and front end, which included creating a responsive layout, showcasing the firm's work, and receiving and responding to feedback.
- **Education Management Web Application:** As the only developer, I built and maintained the entire back end and front end of the application. I developed key features such as student enrollment, course scheduling, faculty management, and administrative reporting.
